OBJECTIVE

Final-year Mechanical Engineering student with hands-on process engineering and Lean manufacturing experience, seeking a full-time role in manufacturing or process engineering where I can apply CAD, design-for-manufacturing, and continuous improvement skills to production systems.

EDUCATION

Stephen F. Austin State University — Nacogdoches, TX *Expected May 2027*
Bachelor of Science in Mechanical Engineering

TECHNICAL SKILLS

CAD & Design: Autodesk Inventor, AutoCAD, Revit 2023 (Certified), Creo Parametric, KiCad
Manufacturing: Toyota Production System (TPS) / Lean, one-piece flow, fixture design, technical drawings
Programming & Analysis: C++, Java, MATLAB (numerical methods), AnyLogic, Microsoft Excel (data analysis, plots)
Engineering Fundamentals: Statics, fluid dynamics, dynamics, mechanics of materials, physics-based modeling

WORK EXPERIENCE

Process Engineer Intern | Dresser Utility Solutions — Low Flow Value Stream *Summer 2026*

- Designed and deployed 2 operator fixtures across 3 assembly stations as part of a Toyota Production System (TPS) / Lean initiative, taking each from concept through CAD modeling (Autodesk Inventor), drawings, and floor implementation — now part of the permanent station setup
- Designed a fixture that cut a new operator's cycle time by 25% by standardizing work instructions and improving ergonomics; operator requests led to a second copy of the fixture
- Designed a single-slot jig that holds one cartridge at a time, moving its station from batch processing to one-piece flow, a core TPS principle
- Received hands-on TPS / Lean training on the production floor and compiled findings into an end-of-internship presentation delivered to company leadership

Cart Associate | Bearkat Golf Course — Huntsville, TX *April 2024 – June 2025*

- Maintained and inspected carts and course equipment, performing routine servicing and troubleshooting to keep the fleet in operation
- Balanced a consistent work schedule with a full-time engineering course load while handling daily customer-facing problem solving

Bike Builder / Technician | Sun & Ski Sports — The Woodlands, TX *May 2023 – August 2023*

- Assembled and repaired bicycles to manufacturer specifications, performing quality and safety checks before delivery
- Diagnosed mechanical issues and carried out adjustments, part replacements, and repairs, then explained the work to customers in plain terms

Math, Physics & Calculus Tutor | Self-Employed *May 2021 – January 2023*

- Tutored high school students in Algebra II, Pre-Calculus, Calculus, and Physics I, building step-by-step problem-solving methods and practice materials that translated technical concepts into clear explanations

ENGINEERING PROJECTS

Senior Capstone — Team A.T.L.A.S. | Automated Tool Locking and Audit System *In Progress*

- Co-designing an RFID-based smart tool cabinet that tracks tool inventory and regulates access through a motorized locking mechanism, as part of a five-person engineering team
- Lead the CAD modeling for the storage device and the mounting system for all electrical hardware — brackets, panel mounts, and enclosures — in Autodesk Inventor
- Delivering a first-semester proof of concept (RFID reader, locking mechanism, physical storage) ahead of a full working prototype with multi-tool tracking and a web dashboard

CERTIFICATIONS

Autodesk Revit 2023 • Microsoft Excel • Microsoft Word • Microsoft PowerPoint
